SUMMARY

Frontend Lead at the biggest tech company in Iraq, I build software people love to use, motion and sound ship in everything I make, business dashboards included, and I helped write The Perfect Interface, the rules every dashboard and app at Enjaz has to follow, from the basics of making an interface fast to the teeny tiny polish details nobody would even notice. I joined Qi as the youngest employee in the group and the only frontend engineer on seven government platforms with 4+ million users, rebuilt and redesigned all seven within a year, took production bugs from multiple a day to about weekly, then hired and trained the three engineers I lead today. I also founded Vitex, a design-engineering studio, where I built Iraq Loto, Iraq's national lottery, on my own. Open-source contributor to Nuxt and Nuxt UI. Curious first, clever second.

EXPERIENCE

Frontend Lead · *Enjaz* Baghdad · full-time, on-site — Jan 2025 – Present

- Joined as the only frontend engineer on seven government platforms with 4+ million users, rebuilt and redesigned all seven within a year, and took production bugs from multiple a day to about weekly.
- Built the frontend team from zero: scouted all three hires from the market and brought them in, then trained and onboarded them. Now lead the four, owning code review, standards, and release quality.
- Helped write The Perfect Interface, the rulebook every Enjaz dashboard and app must implement, from the basics of a fast interface down to the polish details nobody notices.
- The seven include Oil Coupon, Super Qi's most-used miniapp (3+ million families), and the systems running the state OPDC's oil-product distribution to gas stations, bakeries, generators, and farms nationwide.
- Designed and built Enjaz's corporate website, enjaz.tech.

Director of AI & Technology · *Ishtar Center for Democracy Support* part-time — Feb 2024 – Present

- Center member of an Iraqi NGO advancing democracy and human rights; own all of its technology.
- Work with Iraq's top researchers, applying advanced AI models to the center's research.
- Built and operate ishtarcenter.com and the center's conference website.

Founder & Lead Engineer · *Vitex* Baghdad · self-employed — Oct 2021 – Present

- Run a four-person design-engineering studio ("Software, pretty and perfect") building web platforms and mobile apps for Iraqi companies and NGOs, with 20+ production deployments on Cloudflare.
- Built Iraq Loto alone, Iraq's national 42+1 lottery: one Cloudflare Worker serving three sales channels (web, Super Qi miniapp, POS terminals in shops), 480K+ accounts carried over from the old system, and a report to the Ministry of Labour and Social Affairs every draw.
- Risha, e-learning for Iraq's sixth-preparatory students (mobile app, dashboard, website): led all design and frontend, 25K+ downloads.
- Auction Key, a car-auction platform with built-in ERP and white-label apps: 1,000+ cars and $3M+ in transactions a month for Al-Nejoum Al-Zahera.
- Also Quick EV (Iraq's first EV charging network, every picture a line drawing of the real chargers), Rocca Menu (QR menus in 20+ venues), and platforms for the Afaq Al-Obaidi group and the Al-Amal Association.

Software Engineer · *Morshed* Baghdad · part-time, hybrid — Feb 2024 – Dec 2024

- Built Morshed's website, accounting ERP, and internal workflow systems, then shipped websites and ERPs for its clients.
- Owned the whole digital transformation of the business-development & PR firm.

Frontend Engineer · *Digital Logic* Baghdad · full-time, on-site — Oct 2022 – Dec 2024

- Built the **Iraqi Electronic Passport** platform's public website and appointment-booking flow, plus the frontends for the General Company for Ports of Iraq and the Shipping Agencies systems.
- Mentored three interns through their first production features.

Digital Designer · *Speetu* Amsterdam · part-time, remote — Oct 2021 – Oct 2022

- Designed and built websites for Dutch brands, Inflexio among them, plus Speetu's own logo and brand identity.

Graphic Designer · *The Town Studio* full-time, on-site — Jun 2021 – Oct 2021

- Produced print and digital brand assets (brochures, posters, social-media sets, web graphics), mostly for beauty and organic brands, doctors, and surgeons.

Cashier & Store Assistant · *Nakhlat Baghdad* Baghdad · full-time, on-site — Apr 2019 – Jun 2021

- First job ever, in a mid-sized Al-Harithiya supermarket: checkout, inventory, and restocking, learning to handle impatient adults before having a high-school ID.

EDUCATION

BSc Computer Engineering · *Al-Turath University, Baghdad* — expected Aug 2027

Pursued alongside full-time engineering work: a deliberate choice of a private, attendance-flexible university so the career never had to slow down.

SKILLS

Core	TypeScript, Vue 3, Nuxt 4, Tailwind CSS, Nuxt UI, Pinia, Vite, Vitest
Broader stack	React / Next.js, Svelte, Node.js, Go, Firebase
Specialties	Super Qi miniapps, GSAP animation, Three.js, i18n, UI/UX & graphic design
Operations	Linux, Docker, nginx, Cloudflare Workers, D1, R2
Languages	Arabic (native) · English (fluent) · French (basic)
Interests	Classical art · classical music · cinema · philosophy · travel · cars
